- b. Area Description (use additional paper, if necessary):

The driveway in question is located at my residence at 112 Whittier road. My existing driveway is approximately 600 feet long sloping from the house to Whittier road and consists of a gravel base topped with about 5" of recycled asphalt. Water runoff is fed , via culvert, to the headwaters of Furnside brook.

- c. Plan and/or Map Reference(s):

2. a. Work Description (use additional paper and/or provide plan(s) of work, if necessary):

Our driveway , which was installed in year 2000, slopes from the house to Whittier road and consists of a gravel base and topped with about 5 inches of recycled asphalt . Because of the incline and the length of the driveway heavy rains cause erosion requiring me to replenish with 3 to 4 yards of asphalt about every three years. I'm sure a lot of this runoff finds it's way ,via a culvert a hundred feet from the end of the driveway, to the headwaters of Furnside brook then on to East Meadow river that feeds into Milvale resivoir. The driveway has an existing granite chip filled gutter that I believe would be much more effective in controlling runoff if the driveway were paved. My plan is to completely pave from the house to Whittier road that would eliminate the the reprocessed asphalt erosion problem.
