PROJECT NARRATIVE

This Notice of Intent (NOI) is being filed by the Haverhill DPW (Applicant) for the construction of a new combined sewer disconnect and stormwater outfall, located within the Riverfront Area, Bordering Land Subject to Flooding (BLSF), Land Under Water (LUW), Bank and buffer zone to areas subject to the Massachusetts Wetlands Protection Act (MAWPA) (M.G.L. Chapter 131, Section 40), and its implementing regulations (310 CMR 10.00).

Existing Conditions

The site is located between 134 Hale Street and the Little River. The area is industrially developed and contains a railway right of way owned by the MBTA. There is a vegetated slope between Little River and the train tracks.

Project Introduction and Overview

The proposed project is the construction of a combined sewer disconnect and stormwater outfall. The majority of the project will take place within existing disturbed surfaces and will not result in any change in surface conditions. A drainage outfall is proposed along Little River that will require the installation of a temporary cofferdam and construction of a headwall and riprap erosion control.

All of the proposed work is part of Haverhill's comprehensive project to ensure the separation of stormwater and sewage flows. Accordingly the work should be eligible to be treated as a limited project per 310 CMR 10.53(3)d. In addition, the work should be exempt from the riverfront regulations per 310 CMR 10.58(6)h.

Project Impacts and Mitigation

Land Under Water:

There is 2,770 sf of work proposed within Land Under Water. The work will consist of a temporary cofferdam and riprap. 1,480 sf. will be restored to existing conditions while the remainder will be riprapped.

Bordering Land Subject to Flooding (BLSF):

There is a 100-year Flood Zone along Little River. The majority of the work will be outside of the Flood Zone but the headwall and rip rap will be located within the flood zone. No fill is proposed within the Flood Zone, however excavation to reconfigure the bank to meet the outfall is proposed. This would result in an increase in flood storage.

Buffer Zone:

The proposed project is within 100 feet of wetlands, a portion of the buffer zone is within the BLSF. There is a 40 foot section of vegetated slope before the remainder of the buffer zone becomes pavement, compacted soil and other developed surfaces.

Bank:

The project will alter 47 linear feet of Bank. The bank on each side of the outfall will be restored in place.

Riverfront Area:

Portions of the proposed project are located within the Riverfront Area. The project, however, should be exempt per 310 CMR 10.58(6)h as this project is a component of Haverhill's comprehensive project to ensure the separation of stormwater and sewage flows.

Re: Wetland Delineation
Locke Street Area/Haverhill
CSO Phase 1

Dear Mr. Corbin:

As requested, we have delineated the wetlands on the above-referenced site. The limits of the delineation are shown on the attached sketch. The delineation was conducted on November 4 and 15, 2021. The delineation was based on observations of the soils, the plant communities and hydrology.

The Top of Bank of Lake Pentucket was delineated with blue flagging labeled TOB1 to TOB13 and the Top of Bank of Little River was delineated with blue flagging labeled TOB100 to TOB110. The Lake Pentucket bank is a wooded strip along the lake and the upland is residentially developed area. The Little River bank is a wooded strip along the river and the upland is railroad tracks and commercially developed areas. We observed no other resource areas along or within 100 feet of the Phase One roads.

Species which were observed to be dominant on the Lake Pentucket bank include River Birch, Silver Maple, Speckled Alder, Bittersweet, Japanese Knotweed, and Purple Loosestrife. Species abundant in the uplands include Norway Maple, Bittersweet and Japanese Knotweed.

There is no significant difference between the vegetation on the bank and in the upland along the Little River. The observed dominant species include Black Cherry, Gray Birch, Red Maple, Scarlet Oak, European Buckthorn, Arrowwood, Bittersweet, Morrow's Honeysuckle, Multiflora Rose and Barberry. We did not conduct any delineation data plots given the lack of vegetated wetlands and the well-defined nature of the banks.

The MassGIS Online Viewer does not show any Estimated/Priority Habitat Areas or Certified Vernal Pools on the site.

The MassGIS Online Viewer does show a 100-year flood zone on Lake Pentucket and Little River. Your surveyor will need to determine its extent either based on topography or graphically as appropriate.

The MassGIS Online Viewer does show a Zone A Surface Water Protection area around Lake Pentucket. Your plans should reference its extent.

The delineation was based on features visually apparent and the regulations in place at the time. As you are aware the interpretation of the boundaries of wetlands can vary depending on many factors including the time of year, growth phase of vegetation, groundwater levels, soil conditions, weather, and political factors. As a result, no delineation can be considered definitive until it has been reviewed and verified by all of the relevant approving authorities.

If you have any questions in regards to this matter, please feel free to contact us.

Very truly yours,
CARON ENVIRONMENTAL CONSULTING, LLC

Checklist for Stormwater Report

B. Stormwater Checklist and Certification

The following checklist is intended to serve as a guide for applicants as to the elements that ordinarily need to be addressed in a complete Stormwater Report. The checklist is also intended to provide conservation commissions and other reviewing authorities with a summary of the components necessary for a comprehensive Stormwater Report that addresses the ten Stormwater Standards.

Note: Because stormwater requirements vary from project to project, it is possible that a complete Stormwater Report may not include information on some of the subjects specified in the Checklist. If it is determined that a specific item does not apply to the project under review, please note that the item is not applicable (N.A.) and provide the reasons for that determination.

A complete checklist must include the Certification set forth below signed by the Registered Professional Engineer who prepared the Stormwater Report.

Registered Professional Engineer's Certification

I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.
